

ABSTRACT

A doll's seamless garment which is adapted to be dressed, fitted and be removed in a life-like manner from a doll having a height in the range of above 8cm to about 32cm, wherein the doll is bendable at least in part. The garment is molded from an elastomeric material or rubber having an average modulus of elasticity of less than 1MN/m^2 . The garment wall thickness is preferably in the range of about 1mm to about 3mm. Further disclosed is a skin. The skin is adapted to be dressed, fitted and removed from a doll to transform the doll into a different character or object, and wherein the skin is molded in at least one part from an elastomeric material. The skin may have a wall thickness from 1 to 3mm, the material having an average modulus of elasticity of less than 1MN/m^2 . The garments are easily manipulated by children and provide opportunities for creative play. Still further disclosed is a play set comprising, in cooperative combination, a doll donned and fitted with a garment.
